TIME AND DEPTH PROCESSING OF 318.569 SQ.KM 3D SEISMIC

DATA and 240.5 L.KM 2D SEISMIC DATA IN KOHAT EXPLORATION LEASE

1.0 INTRODUCTION:

Oil and Gas Development Company Limited (hereafter referred as Company), a Government of Pakistan Enterprise, is a premier E & P Company engaged in exploration and production of crude oil and natural gas in different parts of Pakistan. The company intends to hire 2D/3D seismic data processing services from an internationally reputed seismic data processing company (hereafter referred as Contractor) for Kohat E.L in Upper Indus Basin (Kohat sub basin) of Pakistan. Base map with 2D/3D survey boundary of Kohat E.L is provided in Annexure-I (a) .

KOHAT E.L:

The area of interest lies in Kohat E.L (Kohat District, Nowshera District of KPK Province, and Orakzai, Adamkhel agencies FR KOHAT and FR PESHWAR of FATA region of Pakistan. OGDCL as operator of the block acquired 2D and 3D seismic surveys in Kohat E.L in 2015-2016. The intended 2D/3D seismic data processing campaign comprises of surface coverage of approximately 240.5 L.Km Kohat-2D and 318.569 Sq. Km 3D (FIRM) (87.266 Sq. Km Shekhan-3D and 231.303 Sq.Km Tanda Jabbi-3D) and 156 Sq.Km Baratai-3D (contingent). Details of the survey is provided in Annexure-II (a) and (b)

Time range of potential reservoir targets is 1300 – 3500 ms (SRD at 1200 meters AMSL). The area falls in active foreland fold and thrust belt where compressional tectonics related thrust anticlines, fault bounded structures and imbricated features are present.

2.0 Scope of Work:

- 2.1 The contractor shall process the data with Time and Depth Migration processing sequence after testing as per requirement and approval of the company. On the basis of PSTM results, the client will decide for further Depth processing (TTI RTM). Any step in the Time and Depth processing workflow may be modified with mutual

consent without affecting the cost of the project. The processing sequence may be modified by addition or deletion or reordering of any module as and when required to achieve the optimum results without any additional cost and subject to approval of the Company.

2.2 The data is required to be processed at 2ms sampling interval with full record length of 6 seconds along with true amplitude recovery.

2.3 The contractor shall provide digital copies of all the outputs, parameter testing, intermediate and final processing, in acceptable format. The contractor shall also provide data as per detailed list of deliverables provided in Annexure-V and Annexure-VI. The contractor shall also submit a comprehensive processing report including description of each step in the applied processing sequence along with testing details after completion of the project. The contractor would have to provide weekly progress reports along with Gantt chart in a timely manner.

2.4 The contractor shall use the state-of-art computer system with internationally used software capable of carrying out 2D/3D time and depth processing by deploying professionals having seismic data processing experience as per Annexure- VII and X.

2.5 The contractor shall provide a list of the hardware and software as per Annexure-XI, along with the vintages/version that would be used for the entire processing job. The contractor will have to mention the place of processing center where the entire processing job will be carried out.

2.6 Contractor will execute the Kohat E.L projects (Shekahn 3D, Tanda-jabbi 3D and Kohat 2D) and Baratai-3D project simultaneously within turnaround time.

3.0 Objectives:

The objectives of seismic data processing is to have best quality Time and Depth 2D/3D Volumes free of multiples, ground rolls, air waves and other noises. Data should be representative of true subsurface picture having tolerable well to seismic tie enabling us to delineate shallowest as

well as deepest reservoir horizons with true amplitudes preservation. True amplitude processing is one of the key objectives of processing. Accurate definition of faults along with good quality data in fault shadow zones and to resolve the subsurface structural and stratigraphic complexities is also one of the major objectives of the job.

4.0 Brief Geology of the Kohat E.L Area:

Kohat Block occupies northern part of the Kohat Fold-Thrust belt which is an integral part of the fold-thrust belt system that rims the entire Himalayan orogenic belt in India and North Pakistan. The geographic boundaries of Kohat Fold-Thrust belt is bounded to the north by MBT, which brings highly deformed Mesozoic rocks of Kohat Range over the Eocene-Miocene sediments of Kohat fold-thrust belt. Towards west, the Kurram Fault juxtaposes highly deformed Mesozoic rocks of Samana Suk, Darsamand with the Eocene to Miocene sediments of the Kohat fold-thrust belt. The Kurram Fault is believed to be a left lateral transpressive boundary. The southeastern boundary of the Kohat fold-thrust belt is the Surghar Range along which Mesozoic rocks are emplaced southwards onto the Punjab foredeep in the south.

The Kohat fold-thrust belt became part of the terrigenous Indo-Gangetic foreland basin by early Miocene and is represented by sedimentary rocks, ranging in age from Palaeocene to Pliocene. The oldest rocks exposed in the area belonging to Palaeocene and consist of limestone and shale. This sequence is conformably overlain by a complex assemblage of shale, carbonate, evaporate and elastic rocks, which was deposited in a restricted marine basin and represents a tectonically isolated portion of the Tethys Sea situated between northwestern Indian continental margin and the southern Asian margin. The Eocene sequence is in turn uncomfortably overlain by a thick succession of Miocene to modern molasses sediments of Murree and Siwalik Group. The molasses interval of sedimentation is lithologically represented by sandstone, shale and conglomerate and is the product of Himalayan Exhumation. Structures in the area are oriented in NE-SW and NW-SE direction.

5.0 Seismic Data Processing Sequence:

Tentative processing sequence for Time and Depth is proposed in Annexure III. However, the actual sequence will be determined at each step of test processing in consultation with the company representatives.

6.0 Parameters Testing/QC:

The contractor would be required to provide the QC display of each processing step of time and depth processing after extensive testing in order to select the optimum parameters. The Contractor will run the test after selecting the test locations in every 3D and 2D project which will be decided by mutual consent. The contractor would be required to submit its recommendations regarding processing sequence/parameters selection. The final decision, however, would be of the company. The company can ask for the provision of data in SEGY/PPT/TIFF/CGM etc. formats after any processing step mentioned in the processing sequence. Company professionals will participate in the project for QC purpose on the stages as proposed in the Annexure-VII, Technical Evaluation Cat. No.6.

7.0 Rates of Processing

The contractor shall specify Turn-Key rates in US \$ per Sq. Km for 3D and US \$ per L.
