

**CLARIFICATION#1 AGAINST TENDER # TENDER ENQUIRY NO. PROC-SERVICES/CB/WL-4705/2020 WIRELINE LOGGING & PERFORATION SERVICES IN THE REGION OF KPK & BALUCHISTAN**

Following Clarification has been made in the subject tender.

S. No.	Clarifications	OGDCL Reply
1	With Reference to OGDCL's tender # WL 4705/2020 for Wireline OH/CH Services, following clarifications are requested to be provided to clearly understand the commercial modelling of this tender. Once main mobilization is done, subsequently if there is a change in logging program that requires additional mobilization, please explain how this extra mobilization can be charged.	Mob/Demob charges include complete transportation of logging unit, personnel, equipment, Explosive, Radioactive material and related accessories to and back from the wellsite. Provision of any additional tool movement may be kept in the main Mob/Demob charges while quoting the rate.
2	With regards to H2S & CO2 presence in well bore, please specify what are the conditions or thresholds for which special precautions are required.	H2S and CO2 detection is done at field level after the sample analysis and presence will be decided on well to well basis by the OGDCL field representative (either production or drilling department).
3	Service Charge: please clarify taking below condition as an example for our understanding , if we do 5 runs then rig down for well testing, one day later rig up and do 5 more runs then will 10 runs will be under one service charge or second service charge for second phase is a separate service charge.	If there is operation planned in between Wireline jobs such as DST or CTU kick off, then a second service charge will be applicable. However, if any trip such as hole conditioning, gauge cutter etc is performed to facilitate Wireline operation, no second service charge will be applicable.
