## CLARIFICATION#3 AGAINST TENDER # PROC-SERVICES/CB/RMD-4725/2020 KPD & TAY INTEGRATED RESERVOIR SIMULATION STUDY & NETWORK MODELING

| S. No. | Clarifications  | OGDCL Reply   |
|--------|---|---|
| 1      | Could you provide a summary of wells<br>with the following data available:<br>- PVT Samples<br>- Core analysis (RCA and SCAL)<br>- RFT / MDT<br>Note: Ideally we would like the<br>attached table in sheet "Well<br>Information" completed  | Approximately 10 - 15 PVT samples<br>RCA 18 - SCAL 1-2<br>3-4 MDTs  |
| 2      | Have PLTs been conducted in the<br>fields. If so, could you provide an<br>indication of how many would be<br>available?<br>Note: Ideally we would like the<br>attached table in sheet "Well<br>Information" completed   | One PSP is available whereas 8-10<br>PSPs are in progress, which will be<br>completed before the start of<br>study.   |
| 3      | How many wells have downhole and<br>wellhead P,T gauges deployed and<br>functioning?<br>How many of those wells with<br>downhole gauges measure<br>commingled flow from more than one<br>reservoir?<br>Note: Ideally we would like the<br>attached table in sheet "Well<br>Information" completed | All Wells have wellhead gauges but<br>none has downhole gauge.<br>None  |
| 4      | Could you confirm how many<br>different equations of state are you<br>currently using to characterise the<br>reservoir fluids?  | This is the part of IRS.  |
| 5      | We have identified a total of some 45<br>DSTs completed, based on the<br>information provided. Could you<br>confirm whether this figure is correct?   | Overall about 50 Well tests (DSTs)<br>will be analyzed as a number of<br>DSTs will not be valid (for any<br>reason like different sand or dry<br>test etc.) |
| 6      | The scope of work make several references to delivering Reserves and Resources estimates. We note that RMD-4699 relates to the completion   | 4725 is an independent study and has no relation with 4699  |

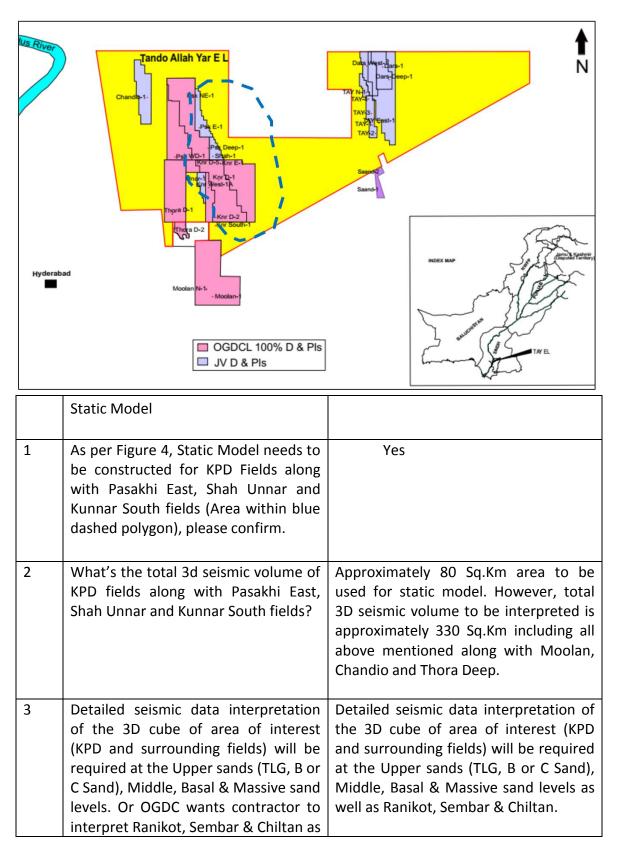

Following Clarification has been made in the subject tender.

|    | of a Reserves Evaluation study. Are<br>there any dependencies between<br>these two initiatives that you believe<br>could impact our resourcing and<br>timing?  |  |
|----|--|--|
| 7  | Regarding compression studies, could<br>you provide an indication as to the<br>maturity of these initiatives at present<br>(e.g. concept select, FEED, FID) as it<br>may impact project scope and<br>resourcing?   | As we understand from your<br>question, you want to know about<br>the indication for compression<br>requirements in these fields. Yes,<br>some fields need immediate<br>compression indicative by their<br>feed & pressure while some fields<br>may require compression within<br>few years based on the in-house<br>working.  |
| 8  | he Tender Enquiry mentions<br>"investigate flow assurance issues".<br>Could you please clarify what sort of<br>flow assurance issues currently<br>encountered in the filed? Which of<br>the following flow assurance studies<br>have been conducted so far: erosion,<br>slugging, hydrates. If any, are these<br>likely to be applicable for the future<br>operation conditions?                 | No Flow Assurance study has been<br>carried out yet. However, in<br>Chandio-1 flow line sluggish<br>behavior of fluid flow is observed.  |
| 9  | As a follow up from question above,<br>could you please elaborate on the<br>requirements regarding flow<br>assurance for this study?<br>For example if slugging/stability<br>analysis is expected, do we expect<br>recommendation for facility designs<br>such as slug-catchers, processing unit<br>sizing and design? If yes are these<br>inputs required for pre-FEED, FEED or<br>FID studies? | The sizing and designing of the slug<br>catcher & processing unit is not the<br>part of this study. Consultant will<br>only work on size and design of<br>flow lines to feed the gas in<br>existing plant and requirement of<br>equipment to handle & process<br>this gas. Detailed bottlenecks in<br>the existing system will be shared<br>with the winning bidder. |
| 10 | How is rate from each well available<br>(measured or allocated)? Where are<br>the measurement points in gathering<br>system?   | Most of the Wells are directly<br>monitored to SCADA system at<br>plant. Only, gas froma few wells<br>back allocated where the system is<br>not installed yet.   |
| 11 | How often are well production tests conducted? How many well tests are   | Usually on yearly basis; Atleast 2-3 for each well depending upon  |

|    | to be reviewed for each well on   | availability  |
|----|---|---|
|    | average? Any multi-rate tests conducted?  |   |
| 12 | Scope 3.4.1.1 "VLP for future wells" & scope "2.2.1 review all relevant data of current and proposed wells" – these future wells refer to wells that are already in decided by the operator to be drilled or the in-fill drilled opportunities we obtain from this study? If the former, could you provide an indication as to how many future wells are planned?                   | At present OGDCL does not have<br>any plan to drill any in-fill well<br>before this study. Consultant will<br>provide VLP for future wells based<br>on this study.  |
| 13 | Scope 2.2.11 (page 38 of OGDCL<br>Tender Enquiry No. PROC-<br>SERVICES/CB/RMD-4725/2020) –<br>"This study will be completed in 3<br>phases". This is different from 5<br>phases proposed in other section.<br>Please clarify. Our assumption is<br>project will be completed in 5 phases.   | Assumption is right. Scope in<br>2.2.11 actually is related to TAY &<br>Satellite fields' pre-integrated<br>network scope.  |
| 14 | Tender request states (section 2.2.14)<br>that "Production forecasts against<br>suction pressures i.e. 1200, 1000, 800,<br>600, 400, 200 & 50 psi". Given that an<br>integrated model will be built, suction<br>pressure will be calculated for each<br>compression scenario. Is there a<br>requirement to perform separate<br>studies flowing against a fixed suction<br>pressure? | Yes, for flexible compression<br>design purpose and sensitivity<br>analysis.  |
| 15 | Please clarify whether the seismic<br>data of all fields will be 3D or are<br>there any fields for which it is not<br>available?  | 3D seismic data for all fields  |
| 16 | Referring to clause 2.2.5, which states<br>"The Consultant will build a new<br>Geological Model (Static Model) for<br>complete Lower Goru package<br>including Sembar formation in Petrel<br>software using the Geophysical,<br>Geological and Petrophysical<br>interpretations for all the fields"   | Static model will be prepared for<br>Lower Goru (Massive sands).<br>However, siesmic interpretation<br>and petrophysical evaluation to be<br>carried out for Whole Lower Goru<br>formation (top-bottom), Sembar &<br>Chiltan Formations for Prospect<br>generation of |

|    | Could you elaborate on what sort of   | conventional/unconventional                                      |
|----|---|--|
|    | data will be available for the Sembar<br>Formation? (Geophysical, Geological  | resources.   |
|    | and Petrophysical).   |  |
|    | Our assumption is that no dynamic   |  |
|    | studies will be required for the  |  |
|    | Sembar Formation. Can you please  |  |
|    | confirm?  |  |
|    | Regarding Section 2 - 2.2.9, which  | OGDCL expects one fine scale static                              |
|    | states "Consultant will develop a   | model of KPD to be converted to                                  |
|    | representative 3D black oil reservoir   | single dynamic model, history                                    |
|    | dynamic model for all the reservoir   | match and prediction generated.                                  |
|    | levels/Sands in Petrel as interface and<br>Intersect as simulator. Consultant | For TAY and Satellite fields no<br>Static of dynamic modeling is |
|    | shall properly initialize and history   | required.  |
|    | match the fine scaled model in order  |  |
|    | to generate reliable predictions"   |  |
| 17 | Could you please clarify if OGCDL   |  |
|    | expects the final fully integrated  |  |
|    | model to include: all three main fine   |  |
|    | scale reservoir dynamic models run  |  |
|    | separately or as one combined   |  |
|    | dynamic model? Running models   |  |
|    | separately will require having 3  |  |
|    | separate Intersect licenses. Downside<br>of combining is added scope and      |  |
|    | possible slow run-time.   |  |
|    | Referring to TOR clause 3.1.2.11(e)   | A few initial level studies available                            |
|    | which states that "Based on bio-  | for few samples.   |
|    | stratigraphy, SCAL and log data,  |  |
| 18 | reservoir characterization of all   |  |
| _  | reservoir units will be established"  |  |
|    | Please indicate the availability of bio-                                      |  |
|    | stratigraphy data and reports for all horizons to be studied.                 |  |
|    | Referring to Clause 3.3.2 about radial  | At least 4 – 5 wells, which will be                              |
|    | model. Could you give as an indication  | selected after discussion between                                |
| 19 | as to how many wells OGDCL expects  | OGDCL & the consultant.  |
|    | to require a radial model?  |  |
|    | Note: Detailed data requested for   |  |
|    | each field will be provided to the  |  |
|    | winning bidder.   |  |

## **G&G** Clarifications

|   | well? Please confirm.  |   |
|---|--|---|
| 4 | Static model will be constructed from<br>only for Lower Goru or TLG Top to<br>Sembar Base? Please confirm  | Static model will be built for Lower<br>Goru (Massive sand).  |
| 5 | Will OGDC share the existing seismic interpretation (horizons/faults)?   | Some data may be provided for<br>reference only, however, it is expected<br>that contractor will carry out<br>independent interpretation of the<br>seismic data.  |
|   | G&G Work   |   |
| 1 | G&G work needs to be done for the<br>TAY-Nim blocks (Chandio, Dars, Dars<br>West, Dars Deep, TAY, TAY North, TAY<br>SW, and Saand) & KPD Satellites fields<br>(Thora Deep & Moolan). As per our<br>understanding of scope, G&G work<br>includes; seismic interpretation,<br>velocity modeling, depth conversion,<br>time maps & depth maps<br>construction. No static model needs<br>to be constructed. Please confirm | Yes   |
| 2 | What's the total 3d seismic volume of<br>TAY-Nim blocks & KPD Satellite fields?  | OGDCL will provide two cropped sub-<br>volumes from Nim-TAY Merged 3D<br>volume. OGDCL had acquired the<br>seismic data through number of<br>campaigns via dynamite mode from<br>Year 1999 onward. Various 3D surveys<br>were pre-stack merged and<br>reprocessed recently. PSTM data will be<br>provided, with RAP processing.<br>Advanced CRS technique was applied<br>pre-stack. Reports may be provided to<br>qualified bidder. |
| 3 | Seismic interpretation needs to be<br>done in TAY-Nim Blocks & KPD<br>satellite fields at TLG, Middle, Basal,<br>Massive & Sembar level? Please<br>confirm   | Detailed seismic data interpretation of<br>the 3D cube of area of interest (TAY-<br>Nim Blocks & KPD satellite fields) will<br>be required at the Upper sands (TLG, B<br>or C Sand), Middle, Basal & Massive<br>sand levels as well as Ranikot, Sembar  |

|   |  | & Chiltan.   |
|---|--|--|
| 4 | Will OGDC share the existing seismic interpretation (horizons/faults)?   | Yes  |
|   | General  |  |
| 1 | On how many wells VSP data is available?   | 10 wells   |
|   | Reservoir Engineering Clarifications   |  |
| 1 | <b>Figure-1:</b> Please share a clearer map with clear color coding of KPD, TAY and NIM along with the satellite fields?   | We think, fields are clearly mentioned<br>by boundaries of all fields in the map<br>placed in Figure-1.  |
| 2 | Please share the location of CPF on the map.   | CPF is in Kunnar Deep Field.   |
| 3 | <b>General:</b> What is the processing capacity and the turn-down capacity of the KPD-TAY Integrated plant?  | 250 MMCFD and 75 MMCFD.  |
| 4 | <b>General:</b> Please share an existing<br>network diagram of the flowlines,<br>trunk lines, processing facilities and<br>equipment, to get an understanding<br>of the effort required for network<br>modeling? Also, the injection points of<br>various wells in the network and<br>delivery points are to be marked on<br>this diagram? | No, it will be shared with the bidder<br>who will win the bid because of<br>confidentiality. Location map is already<br>attached for bidder's estimates and<br>number of wells and fields list along<br>with its briefs is already given for<br>understanding. |
| 5 | Please confirm if OGDCL needs a separate network model for each category (KPD, TAY & Nim and Satellite fields) or one integrated network will serve the purpose?   | Yes, Separate models for each Category<br>as well as one integrated network<br>model including all the satellite fields.   |
| 6 | Is there any compression going on in<br>any of the fields currently? If yes,<br>please provide the type, location in<br>network and details?   |  |

| 7  | <b>General</b> : Please provide a data<br>availability list covering the following:<br>How many production logs available<br>(PLT, PSP etc.). Are there reports<br>available?   | One PSP is available whereas 8-10 PSPs<br>are in progress, which will be<br>completed before the start of study.             |
|----|---|--|
| 8  | How many PVT samples? And what reservoir levels have been sampled?  | 10-15 PVTs are available including upper sands & Massive sand of Lower Goru Formation.                                       |
| 9  | What is the fluid type of each<br>reservoir? How many detailed<br>laboratory PVT reports exists?  | Wet Gas in KPD & all Massive sand<br>reservoir fields of TAY. Whereas upper<br>sand reservoirs are mostly gas<br>condensate. |
| 10 | Also, please confirm if the reports are<br>in digital format or provided in hard<br>form?   | Both digital and hard copies.  |
| 11 | How many well tests report available<br>in digital and hard form? Will any<br>digitization be required?   | More than 50 well test reports are<br>available. Some may require<br>digitization.   |
| 12 | How many BHP (static / flowing) are available?  | 15-20  |
| 13 | How many PTAs are to be<br>interpreted? Can existing valid<br>interpretations results be accepted<br>following review?  | About 50 PTAs are to be interpreted.   |
| 14 | Is core analysis and interpretations<br>(Conventional & SCAL) available for all<br>reservoirs?  | Yes, for all Reservoirs (Only RCA is available)  |
| 15 | <b>Figure-4</b> : In technical approach (figure<br>4), it is mentioned that static and<br>dynamic simulation modeling is<br>required for KPD fields along with<br>some of fields from TAY/Nim JV fields<br>(Pasakhi East, Shah, Unnar, Kunnar<br>South Fields). Please confirm if OGDCL<br>need them to be included in the same | It will be included in same model.   |

|    |   | 1   |
|----|---|---|
|    | model or a separate model will be<br>required since they are part of a  |   |
| 16 | separate JV?<br>Section, Technical approach, 2.6,<br>point (ii): Is RTA must for all the<br>wells? Please provide maximum<br>number of wells that can be selected<br>for RTA.   | Yes. To be performed on all the wells.  |
| 17 | Section 2.2, Scope of Work, point<br>(2.2.9): It has been mentioned that<br>fine scale should be initialized and<br>history matched; although this can be<br>done but various upscaled realizations<br>can also be run in order to enhance<br>performance of the simulation runs<br>and the best one can be selected to<br>proceed with in consultation with<br>OGDCL | Yes.  |
| 18 | <b>General:</b> Does OGDCL see proper fluid characterization as one of objectives of this integrated simulation study?  | Yes.  |
| 19 | <b>General:</b> Will a black oil approximation of compositional (gas/condensate) fluid system (if PVT concludes so) be acceptable to OGDCL as this may have significant impact on results?  | Preferably, it will be a black oil model,<br>however, compositional model can also<br>be built based on the if PVT concludes. |
| 20 | <b>General:</b> Is consultant right in<br>understanding that the simulation<br>type (black oil or compositional) will<br>be decided based on basic RE analysis<br>& PVT findings  | Yes.  |
| 21 | <b>General:</b> Please clarify, if tight gas potential evaluation is only required for Kunnar-Pasakhi Deep field?   | Such potential evaluation includes both KPD & TAY fields.   |
| 22 | <b>2.2.9.4:</b> Wellhead compression is to be compared with "Front  | They are separate scenarios and OGDCL will let the contractor know during the   |

|    | end/Nodal" compression. Will Front<br>end and nodal be separate scenarios,<br>or will OGDCL let us know which one<br>to compare with wellhead<br>compression?  | study.  |
|----|--|---|
| 23 | 3.4.1.1: Pipesim may be used for creating wellbore hydraulic models. Is this acceptable to OGDCL?  | Yes.  |
| 24 | How many samples of CCAL and SCAL data are available? What SCAL experiments have been carried out?   | RCAL /CCAL is available for all available cores (approximately 18 in numbers).<br>1-2 SCAL are available.   |
| 25 | PVT: How many samples with<br>complete PVT experiments (CCE, CVD,<br>Composition, or Sep Test) are<br>available? Please differentiate<br>between those that just have<br>compositional data and those that<br>have more detailed PVT tests. Please<br>provide the numbers on a well-by-<br>well or field-by-field basis. | 10-15 PVT reports are available for KPD<br>and TAY Block fields. Composition<br>reports are also available for most<br>fields.                      |
| 26 | MDT: Does the study require re-<br>analysis of MDT data or just an audit<br>and quality control? Please provide<br>the number of reservoir layers that<br>have been pressure-tested in the<br>wells (using MDT). Please provide the<br>numbers on a well-by-well basis.  | MDT data will be required only audit &<br>quality control. MDT is available in 2-3<br>wells. Two reservoirs have been<br>pressure tested using MDT. |
| 27 | Please provide the number DST/Build-<br>up tests that require interpretation.<br>Please provide the numbers on a well-<br>by-well basis. Have the data already<br>been quality-controlled and cleaned<br>up (possibly for in-house<br>interpretation)? If yes, will the clean<br>data be provided?                       | About 50 tests require interpretation.<br>Clean data will be provided, where<br>available.  |
| 28 | Does a complete OFM database exist<br>or must be completed or created from<br>scratch?   | OFM data exists.  |

| 29 | How many of the reservoir formations are unconsolidated with sever sand production?  | Two reservoirs encountered unconsolidated sand in Dars deep.   |
|----|--|--|
| 30 | What is the (approximate) values of<br>initial pressure, temperature and<br>depth? A range suffices.   | Upper sands reservoir of Lower Goru<br>pressure ranges from 1850-3000 Psi,<br>Temperature ranges from 150-180<br>Degree F and Depth ranges 1900-<br>2300m.<br>Deeper sands reservoir of Lower Goru<br>pressure ranges from 4800-5500 Psi,<br>Temperature ranges from 250-270<br>Degree F and Depth ranges 2800-<br>3500m.  |
| 31 | Flow assurance: Have there been any flow assurance problems already? If yes, please explain.   | No such study has been carried out yet.  |
| 32 | Surface facilities: Could you provide a<br>schematic of the gathering system<br>and surface facilities, and what<br>portion should be included in the<br>study?  | No, it will be shared with the bidder<br>who will win the bid because of<br>confidentiality. Location map is already<br>attached for bidder's estimates and<br>number of wells and fields list along<br>with its briefs is already given for<br>understanding.<br>All flow lines from well to plant<br>including small gathering facilities to be<br>the part of network modelling. Plant<br>input parameters will only be used for<br>compression design and flow<br>assurance. Plant design is not included<br>in scope of work. |
| 33 | History-matching: It is our<br>understanding that the data up to<br>start of the project will be history-<br>matched. Any additional data during<br>the execution of the project (which is<br>up to one year) will NOT be history-<br>matched. Please confirm. | Production data till the start of dynamic<br>modeling should be included in history<br>match.  |
| 34 | Reserve estimate: our estimates on the reserve cannot be certified by  | Yes, It's acceptable.  |

|    | reserve evaluators according to<br>relevant regulatory filing<br>requirements. Is this ok w the<br>operator?   |   |
|----|--|---|
| 35 | Any rock mechanical property data<br>available? For example,<br>porosity/permeability and its changes<br>with the changing in-situ stress<br>condition.  | Νο  |
| 36 | <ul> <li>This project consists of nineteen small to medium sized fields and a total of 43 wells.</li> <li>Please confirm if: <ul> <li>the 19 fields and all Jurassic and Cretaceous intervals are included in the Scope of Work</li> <li>Are all the reservoirs involved independent from each other, other than sharing the common surface network?</li> <li>Are the reservoirs with no oil production considered as gas reservoirs with condensate at surface?</li> <li>What is the approximate size of the reservoirs?</li> </ul> </li> </ul> | <ol> <li>Yes all 19 fields. Producing sands are<br/>main focus for modeling whereas all<br/>Jurassic &amp; Cretaceous intervals to be<br/>evaluated for prospective resources &amp;<br/>Unconventionals</li> <li>Mostly reservoirs are independent<br/>from each othe, however fields<br/>included in KPD Static and Dynamic<br/>modeling are most likely have common<br/>reservoir with fault compartments.</li> <li>So far Yes; Fluid Typing will confirm<br/>this further.</li> <li>Size varies between 20 Bscf to over<br/>1000 Bscf</li> </ol> |
| 37 | This deeper set of fields consist of<br>four gas fields namely Kunnar Deep,<br>Kunnar West, Pasakhi Deep and<br>Pasakhi West Deep, some of which<br>appear to be in hydrodynamic<br>communication.<br>Please confirm the bases of the<br>assumption about hydrodynamic<br>communication. Or if it is still a matter<br>of study  | 1. It is suggested in separate reservoir<br>studies of Kunnar Deep and Pasakhi<br>Deep. Pressure data also dictates so.<br>Now it has been decided to carry out<br>IRSS by merging Kunnar Deep, Pasakhi<br>Deep, Kunnar West alongwith Pasakhi<br>West Deep, Kunnar South, Unnar, Shah<br>& Pasakhi East which have the same<br>reservoir i.e. Massive Sands but have<br>different fault compartments (these<br>fields were not part of previous studies)<br>to make this study fruitful.   |
| 38 | Please confirm the historical production period and number of producing wells in each reservoir aimed to dynamic modeling  | 1. Fields/ Reservoirs aimed for dynamic modeling have been producing since 2012. No. of wells are about 28; Not all the wells have been producing since 2012, A few yet to start producing.   |

| 39 | Please confirm if economic analysis<br>will be based as per reservoir or as<br>per net share   | 1. It will be carried out on three levels<br>(Gross) i.e. Project, Block and field. For<br>JV fields; Net to individual JV should<br>also be reported.   |
|----|--|--|
| 40 | Please clarify if there is a network<br>model available. Also, please confirm<br>the available information related to<br>the network model   | 1. No Network model is available currently. Reasonable information regarding Network is available i.e. lay outs, pipeline sizes, lengths, facilities etc.  |
| 41 | A static model of Kunnar Deep,<br>Pasakhi Deep, Kunnar West, Pasakhi<br>West Deep, Pasakhi North East,<br>Pasakhi East, Shah, Kunnar South and<br>Unnar fields leading to<br>Integrated Surface Network Model<br>KPD Surface Network Model<br>Well Models of KPD wells<br>Simulation Models of KPD Fields along<br>with Pasakhi East, Shah, Unnar,<br>Kunnar South Fields<br>Material Balance Models of KPD Fields<br>along with Pasakhi East, Shah, Unnar,<br>Kunnar South Fields | Yes  |
|    | Static Model of KPD Fields along with<br>Pasakhi East, Shah, Unnar & Kunnar<br>South Fields leading to properly<br>history matched dynamic & network<br>models shall be built. Material<br>balance models for individual fields<br>shall also be built.<br>Please confirm if the scope of work<br>described in Section 2.6 includes all<br>the required tasks in Sections 2.1 to<br>2.5  |  |
| 42 | Scope of Work: Consultant's<br>Interpretation/ analysis/ working shall<br>be vetted by OGDCL's before<br>proceeding further.<br>Please confirm time period and mode<br>of the requested review and approval.   | At the end of each phase and vetted by<br>OGDCL relevant professionals<br>participating in the study. Moreover, a<br>presentation will be given to OGDCL<br>after completing each phase and next<br>phase will be started after having<br>agreement on that work.<br>Approximately two (02) weeks' time is<br>planned for draft review, presentation |

|    |  | and amendments in model if required.  |
|----|--|---|
| 43 | Scope of Work: Consultant will<br>analyze the available geophysical,<br>geological, core data, well logs, well<br>structure and stratigraphic<br>correlations/ cross sections, well tests<br>data, BHP data (incl. MDTs), PVT data,<br>production data, completion histories<br>and all other relevant data related to<br>the current or proposed well(s).<br>Please confirm formats of the data<br>and database availability  | 1. Majority of data is available in file<br>formats commonly used in oil industry ,<br>some data is in hard format.   |
| 44 | <ul> <li>Scope of Work: Consultant will carry out detailed seismic data interpretation of the 3D cube</li> <li>Please confirm that seismic processing is out of scope. Also, please confirm if velocity and formation tops models are available.</li> <li>What are the areas/fields required seismic interpretation, and what is the available seismic data (3D or 2D) and what is surface area, how many horizons are required for seismic interpretation?</li> </ul> | <ol> <li>Interpretation Only. No Processing</li> <li>All the fields, Its 3D, about 350 Sq<br/>Km. Required Horizons are Ranikot,<br/>Lower Goru (TLG, B Sand, C&amp;D Sand,<br/>Middle Sands, Basal Sands, Massive<br/>Sands), Sembar, &amp; Chiltan.</li> </ol>  |
| 45 | Scope of Work: Consultant should<br>identify new conventional &<br>unconventional prospects throughout<br>Lower Goru Sequence.<br>Please indicate number of intervals<br>and thickness of stratigraphy column<br>included in the scope of work   | For prospecting purpose only.<br>Lower Goru ~1250 m<br>Sembar ~500 m  |
| 46 | Scope of Work: The Consultant will<br>build a new Geological Model (Static<br>Model) for complete Lower Goru<br>package including Sembar formation<br>in Petrel software using the<br>Geophysical, Geological and<br>Petrophysical interpretations for all<br>the fields.<br>Please confirm if Decision Space is<br>one of the software options for the<br>study   | Please note that Static model is<br>required only for Lower Goru (Massive<br>Sands) till Top of Sembar.<br>Yes, DS may be an option; if its output<br>stays compatible with PETREL<br>(Currently available software for static<br>modeling); Consultant to confirm/<br>assure that there will be no error or<br>glitch or missing items in data export<br>process to PETREL |

| 47 |  |  |
|----|--|--|
| 47 | Scope of Work: Prospective resources   | Yes they are;                              |
|    | should also be assigned to all the     |  |
|    | possible leads/ prospects in           |  |
|    | compliance with SPE PRMS.              |  |
|    | Please confirm if prospects and leads  |  |
|    | definition and number are included in  |  |
|    | the scope of work                      |  |
| 48 | Scope of Work: The Consultant will     | PTA is a must alongwith at least one of    |
|    | carry out basic Reservoir Engineering  | the suitable RTA.                          |
|    | analysis including Rock & fluid        |  |
|    | properties for utilization in Tank &   |  |
|    |  |  |
|    | Simulation models. The consultant      |  |
|    | will use properly matched RTA (Rate    |  |
|    | Transient Analysis i.e. Fetkovich,     |  |
|    | Blasingame, FMB etc.) & PTA            |  |
|    | (Pressure Transient Analysis) to model |  |
|    | reservoir behavior and calibrate       |  |
|    | material balance & well (IPR) models.  |  |
|    | Please confirm if all mentioned        |  |
|    | analysis are required: Fetkovich,      |  |
|    | Blasingame, FMB & PTA                  |  |
| 49 | Scope of Work: Consultant will         | Yes they may be.                           |
|    | develop a representative 3D black oil  | With regards to NEXUS; OGDCL's aim is      |
|    | reservoir dynamic model for all the    | to build a fine scale simulation model     |
|    | reservoir levels/Sands in Petrel as    | to capture heterogeneity taking            |
|    | interface and Intersect as simulator.  | advantage of Intersect's better algos      |
|    | Please confirm if Decision Space       | and OGDCL's parallel processing            |
|    | including Nexus is one of the software | capacity. If NEXUS can deliver as per      |
|    | 0                                      |  |
|    | options                                | the aim described and final model can      |
|    |  | be delivered in both OFFICE and            |
|    |  | INTERSECT format; they may be an           |
|    |  | option. BUT OGDCL prefers that models      |
|    |  | be built in PETREL and simulated in        |
|    |  | INTERSECT as much of the time              |
|    |  | exporting and importing doesnot work       |
|    |  | properly. In such case responsibility will |
|    |  | be on consultant.                          |
| 50 | Scope of Work: The consultant will     | OGDCL will provide all the input           |
|    | submit techno-economical evaluation    | required for economic model (Costs,        |
|    | of the prediction scenarios along with | taxation, prices etc.)                     |
|    | recommendations.                       | Consultant to run economics in EXCEL       |
|    | Please confirm if actual economic      | in such away that it can be easily         |
|    | data will be provided by OGDCL         | imported in PEEP.                          |
| 51 | Scope of Work: Consultant shall        | 4 - 5 Wells                                |
|    |  |  |

|    | select, in consultation with OGDCL's<br>Reservoir Engineers assigned for this<br>project, key wells for radial modeling  |   |
|----|--|---|
|    | to assess water coning phenomenon<br>and define threshold(s) for future<br>operation.  |   |
|    | Please confirm the number of radial  |   |
|    | models in the scope of work  |   |
| 52 | Scope of Work: 3D volumes/Horizon<br>Seismic attribute analysis would be<br>carried out to establish relationship<br>with Petrophysical parameters of the<br>subsurface. The relationship so<br>established would be used to<br>reinforce future drilling/EOR<br>opportunities.<br>Please confirm if the attributes are<br>limited to amplitude as indicated in<br>2.2.2. or clarify the maximum number<br>of attributes | Seismic attributes are not limited to<br>amplitide only. It refers to all applicable<br>attributes. |
| 53 | The seismic interpretation should be<br>carried out with complete<br>involvement of OGDCL Geophysicist<br>and all the aspects of seismic<br>interpretation shall be approved by<br>OGDCL Geophysicist before moving<br>ahead.<br>Please clarify the OGDCL professionals<br>participation time (10%, 50%,)  | 30 - 50 %   |
| 54 | All logs will be analyzed<br>independently.<br>Please confirm if all well logs analysis<br>as well as the petrophysical model are<br>to be built from scratch  | Yes   |
| 55 | Review the PVT laboratory analysis<br>reports on fluid samples.<br>Please confirm number of PVT reports  | 10 -15 Reports  |
| 56 | Pressure & Rate Transient Analyses<br>Please confirm available static<br>pressure, formation tester, &<br>transient pressure tests and number  | About 50  |
| 57 | The aquifer should be represented by proper cells in all directions. After the   | At this stage it cannot be confirmed.   |

|          | completion of the Static Model, the                        |   |
|----------|--|---|
|          | consultant will propose the X-Y grid of                    |   |
|          | the reservoirs, the number of cells to                     |   |
|          | represent the reservoir and number                         |   |
|          | of model layers.   |   |
|          | Please confirm type of aquifer model                       |   |
|          | to be used: numerical, analytical or                       |   |
|          | combination  |   |
| 58       | The model will be initialized and                          | Fine Grid = Geological Grid without       |
|          | History matched on "Fine Grid".                            | upscaling                                 |
|          | However, if needed, grid may be                            | In order to take advantage of IX &        |
|          | upscaled if the results of both the fine                   | Parallel processing and to capture the    |
|          | grid and upscaled grid are reasonably                      | heterogeneity of reservoir which will     |
|          | matched & run time reduced                                 | help in predicting future development     |
|          | significantly.<br>Please confirm definition of "fine grid" | wells.                                    |
| 59       | Local Grid Refinement (LGRs) should                        | Yes it can be used if required.           |
|          | be used around the wellbore region                         |   |
|          | or away from the wells where we                            |   |
|          | have no control on reservoir                               |   |
|          | properties in case of upscaled model.                      |   |
|          | Please confirm if LGR is required                          |   |
|          | independently of grid size sensitivity                     |   |
|          | analysis   |   |
| 60       | Full Field History Match                                   | For a set of fields but having same       |
|          | Please confirm the meaning of full                         | reservoir which includes Kunnar Deep,     |
|          | field history match: it is related of a                    | Pasakhi Deep, Kunnar West, Pasakhi        |
|          | field dynamic model per field or a                         | West Deep, Kunnar South, Unnar, Shah      |
|          | field dynamic model for all fields, or a                   | and Pasakhi East.                         |
|          | field dynamic model for a set of field                     | History Match will include: Full field    |
|          | and which field are included                               | History Match including all fields, Field |
|          |  | wise History Match and well wise          |
| 64       |  | history match.                            |
| 61       | Well Hydraulics Models (IPR/ OPR)                          | Almost All wells; Nearby offset wells     |
|          | Please confirm number of wells with                        | may be used as type wells                 |
|          | nodal information for VFP modeling                         |   |
|          | as well as approach for well with no                       |   |
| 62       | data<br>Network Models                                     | All the data is available.                |
| 02       | Please confirm availability of network                     | Steady State modeling is required         |

| 67 | Torme & Conditions   | Dowmont will be done ofter completing                               |
|----|--|---|
| 67 | Terms & Conditions   | Payment will be done after completing each phase after having OGDCL |
|    | Invoicing and Payments schedule; Is it                               | 1 5   |
|    | per phase, or after we submit the cost                               | agreement on that work.   |
|    | break-down of phases, can we follow<br>the cost breakdown milestones |   |
|    |  |   |
| 60 | payment schedule.  |   |
| 68 | What are the logs available? How                                     | All the wells have basic triple                                     |
|    | many wells have basic triple   | combo/sonic logs data against reservoir                             |
|    | combo/sonic/spectral GR/other  | zones. 20wells have spectral GR data, 2                             |
|    | advance logs like NMR, spectroscopy,                                 | wells have NMR data, 6wells have                                    |
|    | pressure testing etc. Are any  | FMI/SHDT data, ECS for one well. No                                 |
|    | saturation monitoring CH logs  | CH logs for saturation monitoring was                               |
|    | available?   | conducted.  |
| 69 | How many wells have core data? How                                   | About 16  |
|    | many have RCA and SCAL ? Which                                       | RCA 14; SCAL 1-2  |
|    | studies have been performed as part                                  |   |
|    | of SCAL and in how many  |   |
| _  | wells/samples?   |   |
| 70 | How many fluid sample analysis are                                   | Water/ Gas analysis for all fields are                              |
|    | available for water/gas?   | available   |
| 71 | Roughly what percentage of data                                      | Approximately 10-15% data will be                                   |
|    | needs to be reconstructed due to                                     | reconstructed due to bad hole.                                      |
| _  | presence of bad hole /washouts?                                      |   |
| 72 | This section mentions that   | Both software TechLog and IP  |
|    | petrophysical work needs to be                                       | (Decision-space Petrophysics) are being                             |
|    | carried out in TechLog while in other                                | used.   |
|    | places (3.1.2.2) it is mentioned that                                |   |
|    | other software in OGDCL stable (IP)                                  |   |
|    | can be used. Please clarify.   |   |
| 73 | What does analyze mean - is it review                                | -   |
|    | or re- interpret?  | of the dataset in later points.                                     |
|    |  | Review & Re-interpretation of                                       |
|    |  | Geophysical, Petrophysical, Geological                              |
|    |  | and Engineering data (well tests etc.)                              |
| 74 | Please provide a legible map showing:                                | Location map is given   |
|    | 1] the 3D (and 2D if applicable)                                     | 44 wells  |
|    | seismic data coverage 2] study wells                                 | Given in TORs   |
|    | 3] expected area of seismic  | Approximately 80 sq km  |
|    | interpretation and 4] expected area of                               |   |
|    | the KPD static/dynamic model   |   |
| 75 | Are petrophysical properties to be                                   | Yes, for both oil and gas fields.                                   |
|    | determined for all oil and gas fields or                             |   |
|    | just all gas fields  |   |

| 76 | what is the total thickness of the<br>study interval - the Lower Goru Fm<br>and the Sembar Fm  | <ol> <li>In general, for prospecting<br/>purpose<br/>~1250 m Lower Goru<br/>~500 m Sembar</li> <li>For KPD dynamic modeling/<br/>Material balance<br/>350 - 400 m for Massive sands<br/>of Lower Goru Formation</li> <li>For TAY/Nim &amp; Satellites<br/>Material balance<br/>Upper sands, Middle sand, Basal<br/>sand &amp; Massive sand) range 50<br/>- 500 m</li> </ol>   |
|----|--|---|
| 77 | please provide an example well log<br>section showing the thickness an<br>relative proportion of shale units<br>within the Lower Goru  | Total thickness of Lower Goru<br>formation from top of Lower Goru to<br>top of Sembar formation is about 1200-<br>1250m meter in the fields under study.<br>Overall the whole lower Goru<br>formation composed of Sand – shale<br>packages in alternate way however<br>there are three major thick shale units<br>are present in it. 1- Upper Shale Unit<br>(~125 – 150 meter), 2- Lower Shale Unit<br>(~250 to 300 meters) and 3- Talhar<br>Shale (~ 50 to 75 meters). |
| 78 | A static model is required for<br>'complete Lower Goru including<br>Sembar' - but document (Fields<br>Information) has focused just on the<br>Massive sand gas play. This seems a<br>misalignment - will additional well<br>information from the Upper Sands (oil<br>play) also be provided. Is this all to be<br>incorporated in the model build. | Main focus will be on Massive sands<br>and secondarily on Sembar Fm. Upper<br>sands (Oil play) of KPD area is not the<br>part of this study. However, For<br>Prospecting/ unconventional resources,<br>Whole Lower Goru, Sembar, & Chiltan<br>Fms. Will be evaluated.<br>Whereas Sembar Static model will be<br>prepared upon evaluation if required<br>with the consent of OGDCL's reservoir<br>geologist  |
| 79 | is GIIP just for Massive Sands or for all of Goru  | Yes, Primarily Massive sands & Sembar<br>Fm. But for unconventional and upside;<br>complete Lower Goru, Sembar, &<br>Chiltan Fm. To be evaluated and<br>prospective resources to be reported.   |
| 80 | seismic attribute analysis - is this to be conducted for 1) just the Massive   | For understanding of conceptual facies within the 3D static model and possibly  |

|    | sands to guide conceptual facies<br>within the 3D static model or 2) all<br>Goru and Semabar Sands to assist in<br>the 2D mapping exercise - this needs<br>to be clear  | their lateral distribution for Massive<br>sand and Sembar, where Sembar may<br>lack calibration points.   |
|----|---|---|
| 81 | seismic attribute analysis - is this to be<br>conducted for 1) just the Massive<br>sands to guide conceptual facies<br>within the 3D static model or 2) all<br>Goru and Semabar Sands to assist in<br>the 2D mapping exercise - this needs<br>to be clear | For understanding of conceptual facies<br>within the 3D static model and possibly<br>their lateral distribution for Massive<br>sand and Sembar, where Sembar may<br>lack calibration points.  |
| 82 | Static geological modelling is covered<br>in section 3.1.3 Are the references to<br>'geological model' in 3.1.1.3, 3.1.1.6 &<br>3.1.1.7 to a conceptual facies/2D<br>facies models ( as later repeated in<br>3.1.3.3) or to something else.               | 3.1.3.3 is not the repetition but<br>continuation of SOW guidelines for<br>Static Modeling  |
| 83 | what is the average (TVD) thickness<br>of the total Lower Goru interval to be<br>evaluated  | ~1250 m (In general, for prospecting)   |
| 84 | The petrophysical evaluation outlined<br>follows a conventional reservoir<br>workflow - but evaluation of<br>'unconventional' reservoir is also<br>required - will this require separate<br>unconventional (TOC) workflow                                 | Conventional reservoir workflow to be<br>used for all wells in all fields for their<br>detailed petrophysical evaluation.<br>Unconventional petrophysical<br>evaluation using separate<br>unconventional workflow to be done<br>on a number of wells from the wells<br>understudy as per availability as well as<br>reliability of data and mutual consent<br>with OGDCL representatives.               |
| 85 | What is the process for approval of<br>the Geophysical/Geological,<br>petrophysical work? How long should<br>be allowed for this within the project<br>plan?  | At the end of each phase and vetted by<br>OGDCL relevant professionals<br>participating in the study. Moreover, a<br>presentation will be given to OGDCL<br>after completing each phase and next<br>phase will be started after having<br>agreement on the work done so far.<br>Approximately two (02) weeks' time is<br>planned for draft review, presentation<br>and amendments in model if required. |
| 86 | Does formulation of the depositional  | Of course – Available Log and core data   |
|    | model require core input - what   |   |

|    | information will be provided?  |   |
|----|--|---|
| 87 | "separate models to be prepared for<br>all such prospective horizons" - what<br>does this mean? Is it one 3D geo-<br>model for all the Lower Goru or<br>separate geo-models for separate<br>zones?   | Main focus will be on Massive sands<br>and secondarily on Sembar Fm.<br>However, For Prospecting/<br>unconventional resources, Whole<br>Lower Goru, Sembar, & Chiltan Fms.<br>Will be evaluated.<br>Whereas Sembar Static model will be<br>prepared upon evaluation if required<br>with the approval of OGDCL's reservoir<br>geologist                                    |
| 88 | Is use of the Geo-screening plug-in essential?   | Yes, it is to the extent that it adds value<br>to the analysis by capturing the<br>heterogeneity of the reservoir in static<br>model  |
| 89 | how many PVT samples are available for Review  | Approximately 10 - 15.  |
| 90 | How many PVT regions are expected in the dynamic Model   | Probably not more than one as KPD is<br>wet gas field; still it will be finalized<br>once consultant has reviewed the data.   |
| 91 | Under concise Scope of work heading<br>(2.2.9 pg15 & 3.3.1.2) the dynamic<br>model mode is mentioned as black oil<br>and at 3.2.1.3 its mentioned to use<br>compositional. Kindly clarify  | It will probably be black oil model as<br>the KPD fluid is wet gas however Choice<br>of simulation<br>type will be made after fluid typing as<br>mentioned in 3.3.1.2 (pg. 23); inference<br>of compositional model from EOS<br>tuning should not be considered as it is<br>need based (condensate banking) and<br>can be finalized upon data review and<br>fluid typing. |
| 92 | How many SCAL samples are available for review   | 1-2   |
| 93 | Will analogue SCAL data be provided?   | Yes, if required and if SCAL data for that reservoir is not available.  |
| 94 | Laboratory SCAL analysis in Material<br>balance modeling is seldom<br>applicable, usually it is treated as<br>matching parameter while carrying<br>some, relevance to field recovery<br>mechanism and recovery<br>performance. Is this acceptable to<br>OGDCL? | To the extent of material balance (tank model) YES.   |
| 95 | Are there any previous studies and if  | Available study reports can be shared   |

|     | they will be provided as information for this project ?   | for information only.   |
|-----|---|---|
|     | Any particular reason for using<br>Intersect ? - Eclipse also seems to be<br>capable to conduct this type of study  | Yes, it is. But as OGDCL is moving<br>towards newer technology, it will be<br>preferable. As we need dynamic model<br>built on fine grid to capture the<br>reservoir heterogeneity which will be<br>helpful for future development wells<br>planning. Moreover, its run time is<br>smaller. |
| 96  | If dynamic model is supposed to be<br>integrated with network model and<br>Material balance models - does OGDC<br>has software lic for resolve ? Which<br>version ?   | Yes it should be.<br>No OGDCL doesn't have it yet. OGDCL is<br>planning to have this software in near<br>future.  |
| 97  | What will be the control mode for<br>History matching   | The control mode will be Gas rate and WGR, CGR, BHP & THP will be History Matching parameters. However, for Prediction, THP will be control mode with constraints.  |
| 98  | Radial gridding is not supported in<br>latest versions of petrel ? is Eclipse<br>office suitable to OGDCL   | Yes, it is, but this should only be for coning study.   |
| 99  | Radial grid simulation to capture<br>condensate banking has to be<br>conducted in Compositional mode  | See Response to query 27.   |
| 100 | how many potential candidates are<br>for radial modeling  | At least 4 – 5 wells, which will be selected after discussion between OGDCL & the consultant.   |
| 101 | The dynamics of well producing to<br>ultimate recovery (long term forecast)<br>from a radial grid sector model and<br>full field model will be comparatively<br>different. does OGDCL appreciate that<br>or is there another methodology<br>currently employed by OGDCL | Yes, it is understood. Radial modeling is<br>to capture the water coning and gas<br>condensate banking near the well bore.<br>In full field modeling the same can be<br>captured using LGR in well bore vicinity.   |
| 102 | What would be the criteria for<br>candidate selection for radial<br>modeling - DCA (WOR analysis),RTA,<br>etc. ? any other methodology that is<br>used or advised by OGDCL  | WOR and Condensate banking near<br>well area. Candidate will be selected<br>during study after discussion   |
| 103 | How many well tests to interpreted -<br>please total mention number of PTA  | Kunnar Deep, Kunnar West, Pasakhi<br>Deep and Pasakhi West deep (in total   |

|     | and RTA   | 22 wells & about 44 well tests (Initial &<br>Latest) to cover full field,<br>For TAY and KPD Allied fields, two I.e.<br>Initial & Latest well tests per field will<br>suffice.  |
|-----|---|---|
| 104 | what is the recommended control<br>mode for History Matching - rate or<br>THP or BHP  | Gas rate will be the controlling<br>parameter while WGR, CGR, BHP & THP<br>will be history matching parameters.<br>However for Prediction, THP will be<br>control mode with constraints.  |
| 105 | If possible kindly share the criterion<br>for your qualification of PTA/RTA for<br>matching in order for us to rightfully<br>time the task.   | Nothing special; match should be<br>reasonable considering well geometry<br>Petrophysics, structure and geology   |
| 106 | <ol> <li>Will OGDCL share their economic<br/>model to conduct techno-economic<br/>evaluation or Baker Hughes will build<br/>one from scratch? Will the cost input<br/>data to economic model be provided<br/>by OGDCL or Baker will use its own?</li> <li>Would COMPANY be providing the<br/>base PEEP Software model in the first<br/>instance, with fiscal regime etc?</li> </ol> | OGDCL will provide costing, Taxation<br>and other policy information.<br>Consultant will make economics<br>spreadsheets such that they can be<br>imported to PEEP. No need to build<br>economics model in PEEP.                           |
| 107 | It is recommended to run material<br>balance prediction cases for<br>workover/wellbore intervention,<br>recompletion & stimulation cases in<br>conjunction with Prosper models is it<br>the same understanding of OGDCL or<br>any other analytical technique will be<br>used ?  | Consultant is probably referring to<br>3.2.3.5b on Pg. No.23; For material<br>balance we agree with consultant's<br>approach. For simulation, these will a<br>part of dynamic model. OGDCL expects<br>reasonable agreement in both cases. |
| 108 | Software used by OGDCL.   | We are using<br>Kappa 5.20<br>Petrel 2019<br>ECL 2019<br>IX 2019<br>OFM 2018<br>Techlog<br>DS petrophysics<br>PEEP<br>GEOFRAME  |
| 109 | Software Licenses for OGDCL and JV  | It will Consultant's responsibility if  |

|     | partner staff will be provided by<br>OGDCL or it will responsibility of<br>Contractor?  | required.  |
|-----|---|--|
| 110 | what is the sector models, what kind<br>of analysis is required on sector<br>models ?   | Once complete model has been built<br>OGDCL requires slicing of the said<br>model for its internal and JV use, (At<br>least 5).<br>No special analysis is required until<br>outputs of sector models stay in<br>agreement with full model.   |
| 111 | Well Level DST`s will be included for<br>Dynamic Model History Matching ?   | Yes  |
| 112 | history match will be conducted on just 1 geological realization or three ?   | Please confirm the clause.   |
| 113 | how many parallel capacity is operational in OGDCL ?  | Hardware 24 threads<br>Software 48 threads   |
| 114 | Reservoir modeling predictions will be carried out through integrated surface model ?   | With and without surface model.<br>However final prediction runs will be<br>with integrated surface network model.   |
| 115 | it will be beneficial for project timing<br>purpose if OGDCL can advise upfront<br>of number of production forecast<br>scenarios to be included | <ol> <li>Base Case</li> <li>Compression cases<br/>(incorporating given suction<br/>pressures) and number of<br/>stages</li> <li>Case 2 + Workovers*</li> <li>Case 2 + Infill Wells</li> <li>Case 2 + Workovers* + Infill<br/>wells</li> <li>Case 2 + Workovers* + Infill<br/>wells</li> <li>*Workovers include stimulation,<br/>Recompletion, Add/ Re-perforations,<br/>WSO, &amp; Frac etc. Specific workover<br/>type will be mentioned and<br/>incorporated in economics accordingly</li> </ol> |
| 116 | Only latest well test data will be used<br>for wellbore model matching or<br>multiple tests matching ?  | Multiple well test matching  |
| 117 | A high level conceptual reservoir management plan is required or a detailed one ?   | Detailed one along with concepts.  |
| 118 | Production Forecasting through<br>integrated network model and<br>economic analysis is listed as heading  | It is part of Network modeling phase as<br>mentioned in 3.5. Forecasts from<br>integrated network model (of KPD, TAY   |

| 119 | 3.5 (pg 26). Is it a next "phase" of<br>project structure or is included under<br>network modeling phase, since it is<br>not mentioned in study phases (pg 10)<br>Will predictions be carried out on<br>proven probable and possible<br>scenarios in dynamic and Material<br>Balance Models or just 1 realization ? | <ul> <li>&amp; KPD Satellites) coupled with respective reservoir models (Simulation or material balance) will be used for economics.</li> <li>Yes, predictions will be carried out on proven, probable and possible. However, development options and its economics will be based on 2P (Proven &amp; Probable) case. Rest will however be reported.</li> </ul> |
|-----|---|---|
| 120 | should new potential prospects be<br>included in dynamic modeling   | If within Massive sands then yes it<br>should be included. Rest will be<br>identified on static data and associated<br>resources will be reported.  |
| 121 | Will sembar will be part of new development scenarios in dynamic modeling phase   | No, it will only be evaluated on static data  |
| 122 | Would COMPANY be providing the base PEEP Software model in the first instance, with fiscal regime etc?  | No, OGDCL will provide costing,<br>Taxation and other policy information.<br>Consultant will make economics<br>spreadsheets such that they can be<br>imported to PEEP. No need to build<br>economics model in PEEP  |
| 123 | BIDDER assumes that a PEEP software license is required and this cost will be the BIDDERs. Is this correct?   | YES   |
| 124 | Will COMPANY provide an existing network model available?   | No network model is available.<br>However, pipelines existing layout plan<br>will be shared.  |
| 125 | Can details of the existing facilities be<br>provided? For example map showing<br>well flowlines & trunk lines, Process<br>Flow Diagram for facilities & plant, so<br>that BIDDER can estimate effort to<br>create the network model.   | No, it will be shared with the bidder<br>who will win the bid due<br>confidentiality. Location map is already<br>attached for bidder's estimates and no<br>of wells and field list along with its<br>briefs is also given for understanding.  |
| 126 | BIDDER assumes that Capex estimates<br>for debottlenecking and new<br>compression facilities will be to AACEi<br>Class 5 level; is this correct?  | Yes, and will be finalized having area engineer approval.   |
| 127 | Can the number of simulation runs<br>and other specifications be specified<br>to allow BIDDER to estimate the   | History match case<br>(match should be reasonable; for which<br>consult can use its experience to   |

|     | duration of the proposed work.  | estimate runs)  |
|-----|---|---|
|     |   | Prediction cases  |
| 128 | The scope on "Tando Allah Yar and<br>Nim Block (EL) Fields" (Section 3) does<br>not request a network model to be<br>constructed (like in Section 2);<br>COMPANY to confirm if an existing<br>model is available.<br>If a model is not available, can details<br>of the existing facilities be provided?<br>For example map showing well<br>flowlines & trunk-lines, Process Flow<br>Diagram for facilities & plant, so that<br>BIDDER can estimate effort to create<br>the network model.  | Network model will be constructed for<br>TAY and Nim Block fields separately.<br>According to this mentioned clause<br>model will be integrated with KPD<br>Network Model.<br>No, it will be shared with the bidder<br>who will win the bid because of<br>confidentiality. Location map is already<br>attached for bidder's estimates and no<br>of wells and field list along with its<br>briefs is also given for understanding.<br>Note: It should be noted that forecast<br>& economics should be provided for<br>Project, Block (KPD, TAY/Nim & KPD<br>satellites) and field level as mention in<br>TORs. |
| 128 | BIDDER assumes that Capex estimates<br>for debottlenecking and new<br>compression facilities will be to AACEi<br>Class 5 level; is this correct?  | Yes, and will be finalized having area engineer approval.   |
| 129 | The scope on "Tando Allah Yar and<br>Nim Block (EL) Fields" (Section 3) and<br>thus "KPD Satellite Fields" (Section 4)<br>does not request a network model to<br>be constructed (like in Section 2);<br>COMPANY to confirm if an existing<br>model is available.<br>If a model is not available, can details<br>of the existing facilities be provided?<br>For example map showing well<br>flowlines & trunk-lines, Process Flow<br>Diagram for facilities & plant, so that<br>BIDDER can estimate effort to create<br>the network model. | Network model will be constructed for<br>KPD Satellite fields separately.<br>According to this mentioned clause;<br>model will be integrated with KPD<br>Network Model.<br>No, it will be shared with the bidder<br>who will win the bid because of<br>confidentiality. Location map is already<br>attached for bidder's estimates and no<br>of wells and field list along with its<br>briefs is also given for understanding.<br>Note: It should be noted that forecast<br>& economics should be provided for<br>Project, Block (KPD, TAY/Nim & KPD<br>satellites) and field level as mention in<br>TORs.    |
| 130 | It is assumed that "layouts" are for<br>the overall network rather and at<br>system level (as opposed to<br>equipment level since equipment lists<br>will not be generated for a Class V<br>estimate); COMPANY to confirm.  | This will be for overall network;<br>consultant will identify bottlenecks and<br>propose modification for enhance flow<br>efficiency; Moreover, modifications for<br>compression will also be proposed.<br>Equipment level list is not required but   |

|     |   | it should be understood that these<br>proposals will serve as basis for future  |
|-----|---|---|
| 131 | Following G&G and RE software are<br>available with OGDCL. The<br>consultants/firms will be required to<br>provide all the work on the software<br>listed below:<br>a. Petrel (G&G, RE)<br>b. Geoframe<br>c. Intersect<br>d. Ecrin (Saphir, Topaz)<br>e. PETEX Suite<br>f. OFM<br>g. PEEP<br>h. Techlog/ Interactive Petrophysics<br>Does it mean that we can complete<br>the works with different softwares,<br>but will deliver the final<br>models/results in any of these<br>softwares' formats? OGDCL can use<br>these softwares to access to our<br>results in the future and build on<br>them further. | mechanical modification.<br>Yes different softwares can be<br>used with the approval of relevant<br>Professionals from OGDCL; but it will be<br>preferred if work is done on these<br>softwares because sometimes<br>converted files/models cannot run<br>properly and responsibility will be on<br>consultant in that case.<br>The consultant must use the Intersect<br>software for Reservoir Simulation.<br>Optimum case of final data file should<br>also be converted in the "Eclipse<br>Office" format.   |
| 132 | Can we use other softwares to do the<br>reservoir simulations but will prove to<br>OGDCL that our simulations give the<br>same results as Intersect does? Also<br>will convert our final models/results<br>into the "Eclipse Office" formats.   | Our focus is to build dynamic model on<br>fine grid to capture the reservoir<br>heterogeneity, moreover OGDCL is<br>updating its softwares and models<br>accordingly. However if any simulator<br>which can compete Intersect can be<br>used with the approval of OGDCL area<br>Simulation Engineer but models<br>provided to OGDCL should be in<br>Intersect and Eclipse format which can<br>run properly in both softwares,<br>along with comparison of results in all<br>softwares.<br>Software used for Geological,<br>Petrophysical and Economic Analysis<br>should be used as mentioned above." |
| 133 | can we use any other softwares, but<br>will convert the final models/results<br>to the formats required by these  | Yes it can be used with the approval of<br>relevant Professionals from OGDCL; but<br>it will be preferred if work is done on  |

|     | softwares specified in the tender?   | these softwares because sometimes<br>converted files/models cannot run<br>properly and responsibility will be on<br>consultant in that case.        |
|-----|--|---|
| 134 | The reservoirs part of this scope of<br>work are wet-gas reservoirs and not<br>retrograde gas-condensate reservoirs.<br>Please confirm   | KPD is a wet gas reservoir. Other wells<br>completed in massive sands are wet<br>gas. Upper sand wells are retrograde<br>gas condensate reservoirs. |
| 135 | hypothetical $\Delta P$ will be assumed<br>across compressors, however the<br>detailed design of the compressors<br>(including operating envelope and the<br>practical possibility to achieve such<br>$\Delta P$ ) is not part of the scope of work.<br>Please confirm   | Yes   |
| 136 | The above clarification is also applicable for the wellhead compressors.   | Yes   |
| 137 | "the consultant will submit techno-<br>economical evaluation for the<br>prediction scenarios along with<br>recommendations". OGDCL will<br>provide the appropriate economic<br>parameters to be used in the<br>economic analysis. Please confirm   | Yes   |
| 138 | "Consultant will couple the fully<br>calibrated network model with their<br>corresponding dynamic model for<br>prediction runs". Please clarify what<br>meant by couple? Do you mean that<br>network model to be integrated with<br>dynamic model?   | Yes   |
| 139 | In the light of the previous point,<br>please confirm that network model<br>will be a standalone model and will<br>not be integrated with Material<br>Balance nor dynamic models.<br>However, the outputs of network<br>model will feed other models in order<br>to identify the appropriate reservoir<br>management and production strategy | No. The model will be an integrated.  |
| 140 | Recommendations regarding<br>production enhancement work such  | Yes   |

|     | as stimulation, well intervention, etc.<br>will be provided, but not detailed<br>design for each well   |   |
|-----|---|---|
| 141 | "Compressor's liquid handling<br>capacity should also be studied and<br>optimized in the compression design".<br>Please confirm that detailed<br>compressor design is not part of the<br>scope of work. However, technical<br>advices regarding liquid handling will<br>be provided | Yes   |
| 142 | "Provide field wise certification for reserves". What this means?   | Individual reserves assigned to each field separately according to PRMS guidelines. |
