

CLARIFICATION # 3

Against Tender Enquiry # PROC-FE/CB/WL-4100/2018

for Procurement of Perforating Material

Sr No	Clarification	OGDCL Reply
1	<p>The tender demands that the penetration of the shaped charges should not be less than 60 inches at Briquette Compressive strength of 5700 psi. Moreover, it states that an API RP19B certificate is required.</p> <p>Please clarify if the tender requires an API RP19B certificate at the above mentioned parameters or a certificate issued at different compressive strength is acceptable.</p>	<p>It is clarified that API RP19B certificate must reflect the testing of shaped charges at Briquette Compressive strength of 5500 psi minimum; whereas the penetration of the shaped charges will be evaluated at 5700 psi normalization which must not be less than 60 inches.</p>
