

**TENDER ENQUIRY NO. PROC-FC/CB/P&P/KPD-4413/2019 FOR SUPPLY & COMMISSIONING OF SKID MOUNTED INSTRUMENT AIR DRYER FOR KPD-TAY PLANT**

Sr.No	Query	Response from OGDCL
1	1. For the operating pressure it lists a 58psi min & 232psi max. We typically size for the minimum operating pressure, but with a range this large I want to confirm. Sizing to 58psi will drastically increase the sizing and purge rate of the dryer. Please confirm you want us to size this to operate down to 58psi.	OGDCL: Yes, please follow this range from 58psi to 232psi.
2	I also have a question on the inlet temperature we should size to for the unit. The spec lists an ambient temperature of 118 F. Should we size using a 15 degree approach temperature which would put our max inlet temperature to 133 F or should we use something different? Please confirm what we should use as a max inlet temperature to size the dryer.	OGDCL: Please consider 118F as maximum ambient temperature for our plant site. Do not size using "15 degree above" approach.
