

TENDER ENQUIRY NO. PROC-FC/CB/P&P/DKN- 4612/20 DESIGN AND SUPPLY OF 03 NO'S OF COOLING TOWERS

Sr.	Query	Response from OGDCL
1	According to the tender attachment, saw the below first picture, the fan is at the side of cooling tower for existing installed tower, technically we call that force draft cooling tower. But in the tender, it mentions tower shall be "induce draft" tower, "induce draft" means the fan is at the top of tower to suck the air into the tower, like the below second picture. So we want to make it clear, what kind of tower is required exactly by OGDCL? Please check.	The drawing provided with tender was just for the dimensional purpose of already installed foundations of cooling towers. The bidder has to quote induced draft as shown in 2nd picture.
